                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Application US/08496847

Patent No. 5795864

GENERAL INFORMATION:
APPLICANT: Amstutz, Gary A.
APPLICANT: Gohil, Kiehorchandra
APPLICANT: Adriaensens, Peter I.
APPLICANT: Aristipati, Ramasharma
TITLE OF INVENTION: METHODS AND
TITLE OF INVENTION: PORMULATIONS FOR PREVENTING PROGRESSION OF NEUROPATHIC PAIN
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dehlinger & Associates

Patent No. 582445

GENERAL INFORMATION:
APPLICANT: 3UNCH TEJINDER
APPLICANT: GOHLL, KISHOR C
APPLICANT: WILLIANICH, GEORGE P
TITLE OF INVENTION: METHODS OF PRODUCING ANALGESIA AND
TITLE OF INVENTION: ENHANCING OFIATE ANALGESIA
NUMBER OF SEQUENCES: 34

CORRESPONDENCE ADDRESS:
ADDRESSE: Law Offices of Peter Dehlinger
STERET: 350 Cambridge Avenue, Suite 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COUNTRY: US

Sequence 7, Application US/10352254

Publication No. US20030224343A1

GENERAL INFORMATION:

APPLICANT: Cognetix, Inc.

APPLICANT: University of Utah Research Foundation

APPLICANT: University of Utah Research Foundation

APPLICANT: Office Nobert M.

APPLICANT: Temple, Davis

APPLICANT: Temple, Davis

APPLICANT: McIntosh, J. Michael

APPLICANT: Olivera, Baldomero M.

TITLE OF INVENTION: Kappa-PVIIA-Related Conotoxins as Organ Protectants

FILE REFERENCE: 2314-254

CURRENT APPLICATION NUMBER: US/10/352,254

CURRENT FILING DATE: 2002-01-28

## APPLICANT: Olivera, Baldomero M.

TITLE OF INVENTION: Kappa-PVIIA-Related Conotoxins as Organ Protectants
FILE REFERENCE: 2314-254

CURRENT APPLICATION NUMBER: US/10/352,254

PRIOR APPLICATION NUMBER: US 60/352,219

PRIOR PILING DATE: 2002-01-29

NUMBER OF SEQ ID NOS: 28

SOFTWARE: Patentin Ver. 2.0

LENGTH: 27

TYPE: PAT

ORGANISM: Conus purpurascens

FRATURE:

NAMBKEX: PEPTIDE

NORGANISM: (1). (27)

OTHER INFORMATION: Xaa is Hyp
